No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description

                                                                                                           The present sequence encodes ManA, a thermostable mannanase A polypeptide derived from Acidothermus cellulolyticus. ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicellulose in a starting material to simpler carbohydrate units ultimately to sugars which are useful in the food, feed, paper pulp, and biofuels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful in purifying ManA, or detecting ManA polypeptide expression, and as well as reagent tools for characterizing the molecular actions of ManA
                                Novel thermal tolerant mannanase A polypeptide derived from Acidothermus cellulolyticus, useful for reducing hemicellulose in a starting material, for processing of food, and as bulking agents in food stuffs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a GuxA polypeptide. GuxA is thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biofuel production. GuxA is also useful in the conversion of biomass to biofuels and biofuel additives, in detergents, pulp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA, or detecting GuxA polypeptide expression, as well as reagent tools for characterizing the molecular actions of GuxA polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1810 ATCAAACCGGGTCTCCAGTTGATGAATACCGGGTCGTCGTCGGTGGATTTGTCGACGGTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated polynucleotide molecule encoding a thermostable AviIII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucleotide is useful for reducing reliables in a starting material which involves administering to the starting material, e.g. agricultural biomass or municipal solid waste, a polypeptide molecule of the polynucleotide. The method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents DNA encoding the Acidothermus cellulolyticus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2605 GTGTCGGGTGGGGTGAAGAGTGCAGTATAAGAATAATGATTCGGCGCCGGGTGATAATCAG 2664
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a thermostable avicelase polypeptide, designated AviIII. AviII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in textile processes. The thermostable AviIII peptide is useful in the degradation of cellulose, and in generating specific anti-AviIII antibodies that are useful in purifying recombinant AviIII polypeptides from genetically engineered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AviIII polymucleotide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New thermostable AviIII peptide from Acidothermus cellulolyticus, useful for degradation of cellulose or in generating anti-AviIII antibodies for purifying recombinant AviIII polypeptides from genetically engineered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20

```
polypeptide is useful in the degradation of cellulose into biofuel, or for conversion of biomass to biofuel additives. It is used in detergents, pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other cellulase or glycoside hydrolases. The novel polypeptide generates atternative cellulase enzymes capable of assisting in the commercial scale processing of cellulose to sugar for use in biofuel production. The present sequence represents a A. cellulolyticus Guxl cellulase encoding

                                                                               The plasmid, pAEC 1, was prepd. ligating chromosomal DNA contg. the gene (obtd. from Aeromonas) into pUC18. The gene can be used to produce recombinant enzyme which is used for the effective utilis- ation of biomass resources and the mfr. of pharmaccuticals and foodstuffs, and also for the detergent and delinking of waste paper. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 27-AUG-2003 to correct OS field.)

The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4,5, Cel B1/2, Cel 1/2/3, Cel 6 or Cel B3/B5, or a stability region from one of the defined full-length sequences, or functional equivalents. Cel B4/S extends from amino acid A1011 to P1424 or K4425 or N1426, and Cel B4/S extends from amino acid K635 to N1426 in the sequence shown in AAY13492; Cel B1 extends from amino acid X93 to D481, Cel E6 extends from amino acid Y133 to K1751 and the stability region extends from amino acid V133 to K1751 and the stability region extends from amino acid V13494. The new sequence shown in AAY13493; Cel E3/B5 is shown in AAY13494. The new carymes are useful in laundry detergent compositions to prevent or remove staining, backstaining or graying, for use on cellulosic materials including cotton-containing fabrics. They are especially useful for preventing redeposition of colorant during stonewashing, and for.

processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using non-truncated cellulase compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Active cellulase protein; alkalinophilic; textile processing; proteinase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                40

The present invention relates to a cellulase active protein, which is substantially free of proteinases of native thermophilic and alkalinophilic origin, where the cellulase active protein consists of the CelB5 amino acid sequence. The cellulase active protein is useful for treating cellulosic materials including cotton-containing fabrics, as detergent additives. The cellulase active protein is also useful for improving the feel and/or appearance of cotton-containing fabrics, for removing surface fibers from cotton-containing whits or for imparting stonewashed appearance to cotton-containing denims. The present proteins are stable under condition of alkaline pH and elevated temperatures, thus suitable for textile processing and in commercial detergents. The present sequence is E3/B5 hybrid protein DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ||||:::|||

The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4/5, Cel B1, Cel B1, Cel 1/2, Cel 1/2/3, Cel 6 or Cel 83/B5, or a stability region from one of the defined full-length sequences, or functional equivalents. Cel B5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid K635 to N1426 in the sequence shown in AAY13492; Cel B1 extends from amino acid K35 to Cel B1/2 extends from mino acid K35 to G812, Cel E6 extends from amino acid CH124, Cel B6 extends from amino acid CH124, region extends from amino acid CH124, region extends from amino acid CH123, the new sequence shown in AAY13493; Cel E3/B5 is shown in AAY13494. The new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  enzymes are useful in laundry detergent compositions to prevent or remove staining, backstaining or graying, for use on cellulosic materials including oction-containing fabrics. They are especially useful for preventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   enzymes show reduced redeposition of dye compared to using non-

celBS amino acid sequence. The cellulase active protein is useful for treating cellulosic materials including cotton-containing fabrics, as detergent additives. The cellulase active protein is also useful for improving the feel and/or appearance of cotton-containing fabrics, for removing surface fibers from cotton-containing whits or for imparting stronwashed appearance to cotton-containing denims. The present proteins are stable under condition of alkaline pH and elevated temperatures, thus suitable for textile processing and in commercial detergents. The present

The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4, Cel E1/2, Cel I1/2/3, Cel 6 or Cel E3/B5, or a stability region from one of the defined full-length sequences, or functional equivalents. Cel B5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid A101 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid A102 to D481, Cel E1/2 extends from mino acid A103 to D481, Cel E1/2 extends from x39 to G812, Cel E1/2 and the stability region extends from amino acid V123 to K1751 and the stability region extends from amino acid A103 to G635, In the sequence shown in AAV13493; Cel E3/B5 is shown in AAV13493; Cel E3/B5 is shown in AAV13491. The new enzymes are useful in laundry detergent compositions to prevent or remove
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nou-
                              New truncated cellulase proteins, useful in detergents and for producing stonewashed' denim.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     staining, backstaining or graying, for use on cellulosic materials including cotton-containing fabrics. They are especially useful for preventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using r
                                                                                                                     Disclosure; Page 20-23; 65pp; English.

The present invention relates to a cellulase active protein, which is substantially free of proteinases of native thermophilic and alkalinophilic origin, where the cellulase active protein consists of the CelB5 amino acid sequence. The cellulase active protein is useful for treating cellulosic materials including octton-containing fabrics, as detergent additives: The cellulase active protein is also useful for improving the feel and/or appearance of cotton-containing fabrics, for removing surface fibers from octton-containing knits or for impatting stonewashed appearance to cotton-containing whits or for impatting are stable under condition of alkaline pH and elevated temperatures, thus suitable for textile processing and in commercial detergents. The present sequence is celB gene

The method is useful for surface display of proteins, particularly for displaying a protein on the surface of e.g. spores, for improving a protein, or for isolating a substance. These methods are useful in obtaining monoclonal variants from a large library, or in high-throughput screening of antibodies for use in therapy (e.g. as vaccines), diagnosis or analysis. This polynucleotide sequence represents the CMCase gene with
Methods for surface display of proteins, e.g. displaying a protein on the surface of spores, improving a protein or isolating a substance, by transforming a host cell harboring a genetic carrier with spore or virus

displayed on a genetic carrier, improving a protein or isolating a substance in a mixture comprising transforming a host cell harbouring a genetic carrier consisting of a spore or virus with the vector library. The method is useful for surface display of proteins, particularly for displaying a protein on the surface of e.g. spores, for improving a protein, or for isolating a substance. These methods are useful in obtaining monoclonal variants from a large library, or in high-throughput sorreming of antibodies for use in therapy (e.g. as vaccines), diagnosis or analysis. This polymucleotide sequence represents the CMCase gene with a mutated signal sequence to enhance its hydrophobicity relating to the

The present invention relates to a new method for displaying a protein of interest on a spore surface. The method of the invention involves preparing a vector comprising a gene construct containing a gene encoding a spore coat protein and a gene encoding a protein of interest, transforming a host cell with the vector, displaying the protein of interest on a surface of a spore of the host cell, and recovering the spore. The method is useful for producing a delivery system for recombinant live vaccine. The method is also useful for improving a recombinant live vaccine. The method is also useful for improving a notein of interest using a resistance property of spore, in bioconversion reactions, for preparing protein microarray, for producing an antibody to antigen in vertebrates, and for preparing a whole cell absorber. The spore coat proteins used circumvent a necessity for passage across cell membrane, so that they do not need secretion signal and target signal which are prerequisites of surface display motif, therefore no surface display of protein, such as beta-galactosidase, in orderly fashion, which is difficult to pass across cell membrane. The protein cotd-carboxymethyl cellulase (CMCase) fusion protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2170

Whole plants were challenged with 450,000 sporangia/ml P. infestans isolate US-1 (US940501) in Biotron (Madison, Wisconsin). Leaf tissue was collected at 1, 2, 5, 12, and 24 hours post-challenge and frozen in liquid nitrogen immediately upon removal. Kennebec plants showed no signs of HR.

// clone_lib="Washington Navel orange cold acclimated
flavedo & albedo cDNA library.
// note="Vector: Lambda Uni-ZAP XR, excised phagemid;
// site 1: EcoRI; Site 2: XhoI; Plants were grown in the
field at University of California, Riverside Agricultural
Operations since 1983. The scion was Washington Navel
orange and the rootstock Carizzo Citrange. Tissue from
mature fruit was harvested at mid-day in January 2002
during a cold spell, when pre-dawn temperatures were
approximately -2 to 2 degree C. Approximately 2 cm median
sections of the rind were excised in the field from
several fruits, then wrapped in aluminum foil and frozen
quickly in dry ice. Total RNA was extracted using a phenol
extraction procedure described in J. Japanaese Soc. Hort.

```

```
Sci. (1996) 64:809-814. Poly(A) RNA was purified, a CDNA library was made, and 1 million primary lambda CDNA clones were in vivo excised to give a population of pBluescript SK(-) phagemids. All steps to this point were performed in the TJ Close lab at the University of California, Riverside (Fenton). Phagemids were plated, plasmid DNA purified, CDNA clones archived, and DNA sequences determined bi-directionally using an AB13530 at the Arizona Genomics Institute, University of Arizona (Collura, Feuerbacher, Kim, Kudrna, Wing, Yu). Chromatogram files were transmitted to UC Riverside (by Yu), then processed at UC Riverside (by Wanamaker) using the HarvEST pipeline (http://harvest.ucr.edu) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were deposited to GenBank."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DQ/12391

DG1 89 C02.g2_A002 Dark Grown 1 (DG1) Sorghum bicolor CDNA, mRNA
sequence.
                                                                                                                                                                   Email: mmpratt@uga.edu
Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science, plant material and RNA prepared at Texas A & M University,
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia, Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         149 ATAGCAATCAGCCGAAACTCAAATGAATCCGGTCCGGGAGGAGCCTGTGCTGGCCCGGGC 208

/note="Vector: pWE18S-FL3; Site 1: Xho1; Site_2: Xho1; Th.
library was prepared from a mixture of poly4+RNA from
callus culture tissue and cells in suspension culture.
Double-stranded cDNA was cloned unidirectionally into
different DraII sites of the pWE18S-FL3 vector (5-prime
DraII site is CACGTGTGTG, 3-prime DraIII site is
CACCATGTGT). Xho1 excises the CDNA insert."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in the Human Genome Center, University of Tokyo Institute of Medical Science; plant material and RNA prepared at Texas A & M University; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              214 ATAGCAATCAGCCGAAACTCAAATGAATCCGGTCCGGAGGAGCCTGTGCCTGGCCCGGGC 273

The resulting fragments were between 0.8 and 3 kb and were cloned into the vector (.x/y reads in Ml3mpl9, .b/g reads in pUC19). The same ligation was transformed into DBSa."
